This is the fifth office action for application number 10/654,408, Folding Cantilever Support and Method, filed on September 3, 2003.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 2, 2006 has been entered.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 1, line 9, "the" has been deleted and --a-- has been inserted in place thereof.

In claim 4, lines 2-3, the recitation of "a common" has been deleted.

Art Unit: 3632

In claim 21, line 2, --for attaching-- has been inserted after "means"; in line 4, "the" has been deleted and --an-- has been inserted in place thereof; and in line 7, "said" (second occurrence) has been deleted.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: one of the primary reasons for the allowance of the claims in this application are the limitations of a portable device for supporting a load in a cantilevered disposition extending from a generally horizontal extant structure, the device having a platform portion extending in a first direction, the platform portion for holding the load in a cantilevered disposition, a bracing portion extending in a second direction generally opposite of the first direction, the bracing portion having a first bearing segment at its distal end for transferring an upward vertical component of a moment couple, caused by supporting the load in a cantilevered disposition, at least one hanging bracket pivotably attached to a first axis interjacent the platform portion and the bracing portion, the hanging bracket having a second bearing segment at its distal end for transferring a downward vertical component of the moment couple to the top surface of the extant surface, the hanging bracket pivoting into a generally compact disposition relative to the platform and the bracing portions when the device is not in use, and wherein mounting the second bearing segment of the hanging bracket on the top surface adjacent to an edge of the structure and applying the load to the platform portion causes the first bearing segment of the bracing portion to engage with the bottom surface of the structure at a location remote from the edge, thereby supporting the load in the cantilevered disposition

extending from the extant structure and accommodating a diversity of variable thickness between the top surface and the bottom surface of diverse ones of the structure, now included in independent claim 1 and in combination with the other elements recited in the claim, which is not found in the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
